

Advanced Calving Clinics

Even if you've calved hundreds of cows in your lifetime, you'll want to attend this workshop. You'll learn new techniques to manage difficult deliveries, tricks to snag a leg that is back, first aid at calving time, and when to call your vet for assistance. All cattlemen can learn new tips to improve neonatal calf care to improve the long-term health of those calves. And, feeding the cow during late gestation and early lactation has huge implications on the calving process, colostrum quality and quantity, and next year's calves as well.

Program Agenda

Late gestation and early lactation nutrition
